

Sunset applications and retain secure, role-based access to your data

Archive Central is a role-based, secure web solution to give business users access to historical data for queries, reporting and comparisons.

Whether you are adapting to business changes through mergers and divestitures, or embracing the latest technology like IFS Cloud, SAP S/4HANA, or Microsoft Dynamics 365, you need to consider what to do with your legacy data to make sure you comply with global data privacy legislation and regulations.

Archive Central™ is a secure platform that gives you read-only access to structured and unstructured data, without having to keep legacy systems running.

Optimise the use of your data from legacy systems

Don't let your legacy data stop you from embracing new technologies

Keeping hold of your legacy data can stop you from embracing the latest in technology. With Archive Central, you can keep your legacy data, without following the costly archiving route, and still keep the best IT options open for your business.

Focus your team on business-critical systems

Let us take care of the legacy data you need for legal and compliance needs, with read-only access. No need to spend time and resources on maintaining out-of-date database versions or patching old systems; you can just consume the data without the hassle.

Optimise your access to legacy data

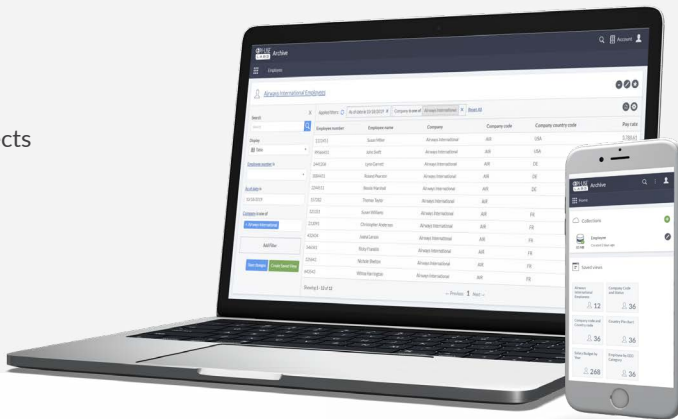

Import your legacy data into a secure, searchable web-based repository. Customise the layout to give users the same look that they are used to so they can find information quickly.

Implement modern security protocols

Comply with GDPR and other data privacy laws by providing role-based access to sensitive data. The Archive Central platform is ISO 27001 certified, and adheres to the best security standards to keep your data out of the wrong hands. Also, all information is encrypted for security and regulatory compliance. Backups and disaster recovery are handled as part of the solution.

Archive Central in action

How Archive Central is used today

Retirement of legacy systems

Organisations are reducing operational costs by retiring legacy systems which can be expensive to support, or perhaps running on platforms which are insecure. Legal retention periods for business data delay the retirement of legacy systems. Archive Central provides a modern data management platform for record management.

Right-sizing of ERP systems

Businesses are looking for solutions to control and limit data growth in their ERP systems. This includes options to extract and archive data and documents they no longer require immediate access to. Archive Central provides a simplified, secure repository into which you can unload data, making your ERP system more cost-effective, as part of a transformation project.

Business Transformation

After a merger or divestiture, the organisations involved may need to hold a selection of data for compliance reasons. Archive Central provides a controlled mechanism to share the relevant master and transactional data to the relevant parties for regulatory and governance purposes.

Data archiving for any legacy data

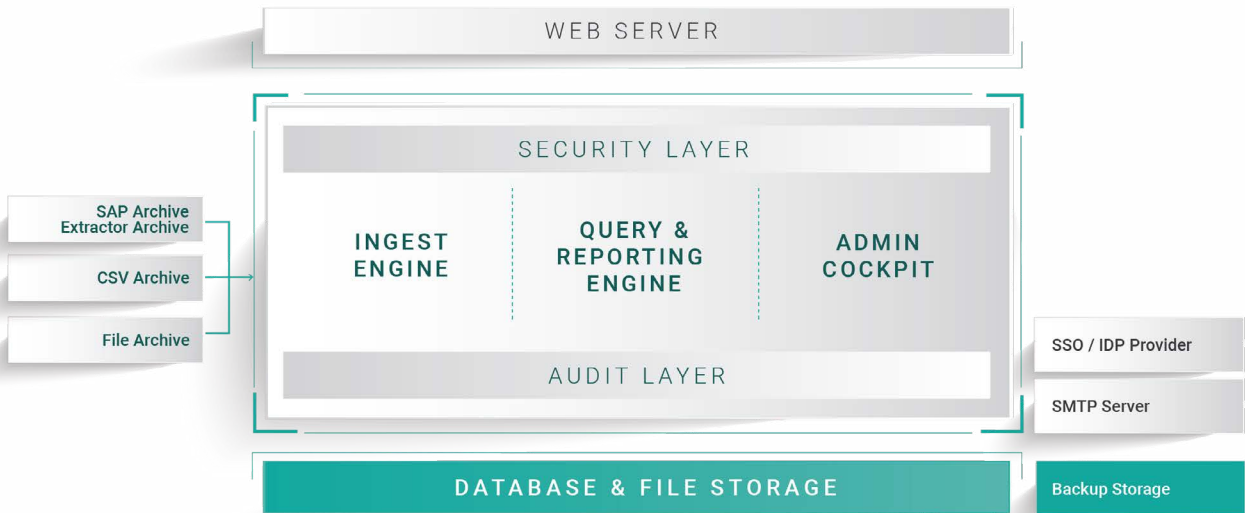

Many IT system landscapes have a hybrid scenario which includes best-of-breed solutions. Archive Central recognises this hybrid scenario and doesn't limit the use of the platform to only certain vendor-specific solutions by imposing a fixed data model. Instead, our extractors are designed to retrieve your highly customized data model alongside the actual data. This approach enables Archive Central to remain flexible and adaptable, without requiring extensive customization services to conform to your standards.

Realise your project

EPI-USE Labs will support your project to export the data from your current Production environment and create the new Archive Environment:

Technical architecture

- In line with best practices, the solution is deployed as a hosted SaaS solution.
- The application leverages elastic scaling and storage mechanisms, provides a variety of hosting locations (in compliance with GDPR and other privacy legislation) and uses CDNs for fast responses globally.
- Support for documents is built in as standard; for example, linking payslip documents to the employee can be part of the data that is stored in Archive Central.

About EPI-USE Labs

As a global software solutions and managed services company, EPI-USE Labs helps you to maximise the performance, management and security of your SAP® and SAP SuccessFactors® systems. Our clients tell us every day how we have transformed their business operations. Contact us to find out how we can help you solve your business challenges.

About G3G

G3G, an SAP Gold Partner with a 25-year track record of helping clients maximise the value of their SAP solutions, specialises in SAP Advisory, S/4HANA and SAP Business One Cloud migrations, systems integration, and application managed services. G3G is an SAP-certified Partner Centre of Excellence and our vision is to inspire our clients to use SAP technology in innovative ways to support digitisation and adoption of intelligent business processes throughout the entire value journey.

We know you have your own requirements, and would like to discuss how Archive Central can support your needs.

We have a free system analysis report that will provide you with key insights into your data.

Group Elephant is a largely employee-owned group of companies, nonprofits and impact investment organisations, with a strong global presence. The Group is characterized by a primary strategic imperative in terms of which it goes 'Beyond Corporate Purpose' in its day-to-day activities.
